Project

Namakkal Tourism | Android SDK, Java, Kotlin, XML, RecyclerView, Card view, Google Map.

- Developed a tourism app focused on promoting the Namakkal region.
- Users can access information about tourist destinations, local attractions, hotels, and travel itineraries.
- This app was built using Java and Kotlin to provide a seamless, user-friendly experience.

Responsibilities:

- Developed user-facing features using Kotlin for Android, integrating responsive UI elements and custom components to ensure a seamless user experience for tourists exploring Namakkal.
- Designed and implemented a robust database using SQLite to store and retrieve data about tourist destinations, hotels, transport options, and local activities in Namakkal.
- Utilized RESTful APIs built in Java for the backend to provide dynamic content such as weather updates, tourist information, and availability of services in real-time.
- Implemented geolocation features allowing users to find nearby attractions and plan personalized itineraries using Google Maps APIs integrated with the app.
- Developed user authentication and profile management systems to allow tourists to create, update, and manage their accounts and save personalized preferences and itineraries.

Language

- Tamil (speak and write)
- English (speak and write)
- Telugu (speak)

Declaration

I hereby declare that the information furnished above is true to the best of my knowledge.

Place: Chennai

Yours Faithfully,
